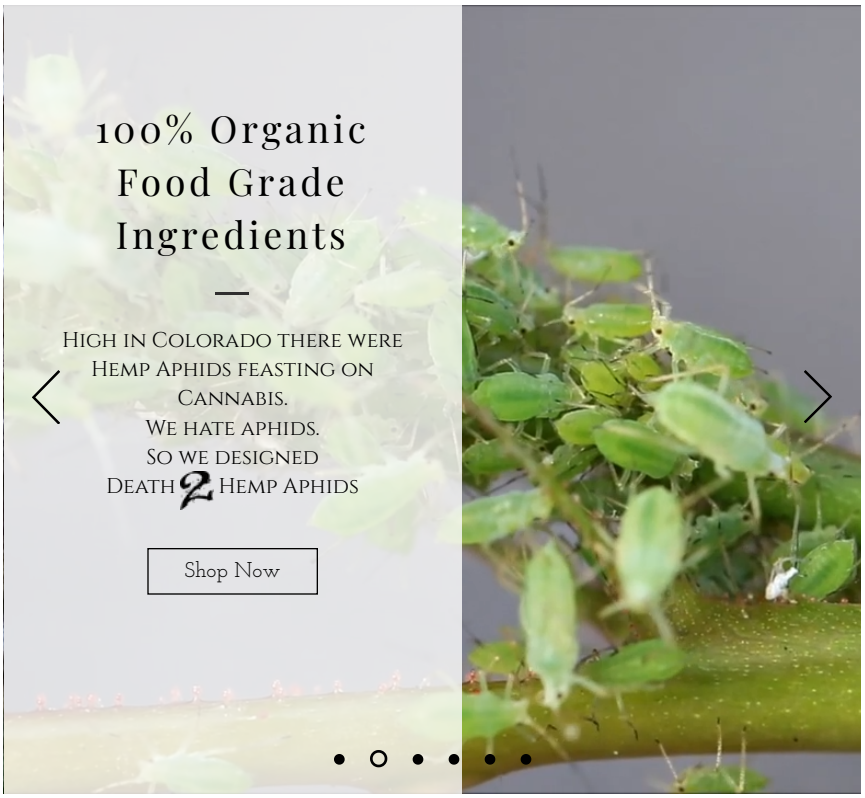
100% Organic, Non-GMO

Welcome to Life Without Cannabis Pests

Introducing Death 2 Pests



We have developed a fungicide & insecticide that eliminates soft-body cannabis pests such as Aphids, Mites, Fungus Gnats, Whiteflies, Thirps, and ALL THEIR LARVA AND EGGS! It also destroys Powdery mildew, Botrytis and Fusarium.

Yes, we can destroy Fusarium.

Our years of research and innovation have resulted in a efficient plant wash and soil drench that is legal in all states that cannabis is grown in, including California. It is also safe to use on all organically certified feed and food crops. It's great to use on ornamental plants and turf grasses as well. We have you covered.

100% Organic & Non Toxic!

Organic farmers use Integrated Pest Management practices, protect wildlife, promote biodiversity, work to improve, and maintain native ecosystems.

Our organic formula is free of GMO engineering - helping to mitigate the unwanted spread of GMO crops and contamination.

Certified organic agricultural operations (certified organic farmers) avoid the use of most synthetic pesticides found in conventional agriculture. Chemical pesticides and herbicides have been linked to birth defects, obesity, diabetes, ADHD, and other health problems.

These are the reasons we choose to make products that are 100% organic.

We want clean food to eat, clean flowers to smoke, and save the Honey Bees while killing pests and fungus that attacks our garden. We think you want the same thing.

Feel Good.

Do No Harm to Beneficial Bugs!

Bees are responsible for pollinating many crops, they are in danger of being killed due to toxic pesticides. We love Bees and our insecticide and fungicide does not harm them.

Ladybugs and Lace Wings have a gluttonous, insatiable appetites for aphids and other insects, and this is why we love them. The "good" bugs are the ones that stay in your garden devouring all the insects that invade your plants. We always want to protect them so they can protect your plants.
